

Respironics Cough Assist CA-3000

Respironics Cough Assist Mechanical Insufflator-Exsufflator CA-3000

Cough Assist is a noninvasive therapy that safely and consistently removes secretions in patients with an ineffective ability to cough (peak cough flow <270 l/m).

Cough Assist clears secretions by gradually applying a positive pressure to the airway, then rapidly shifting to negative pressure. The rapid shift in pressure produces a high expiratory flow, simulating a natural cough.
